EXPERIENCE

Tech Lead

Cars24 Private Ltd.

April 2024 – Ongoing Gurugram, India

- Designed & Enabled Autopilot scaling to 4 plus geographical regions in India, providing on demand driver service to end users.
- Crafted & Built Service Management Platform which enabled 6+ clients to manage their services centrally.
- Implemented platforms for multiple business lines for Cars24.

Senior Software Engineer

Airtel International LLP (Airtel Africa)

July 2022 – April-2024 Gurugram, India

- Created a microservice seamlessly connecting Airtel Payment and Zambia’s National Financial Switch, boosting transaction traf- fic.
- Designed and developed robust solutions for Bill Payments, Loans, and mobile money services, achieving a 30% system reliabil- ity boost and a 20% increase in user engagement.
- Implemented an externalized logging mechanism, boosting performance and significantly improving the reliability and availabil- ity of logs.

Senior Software Engineer

UnitedHealth Group - Optum Global Solutions

March 2022 – July 2022 Gurugram, India

- Collaborated on transforming a multi-step process into a streamlined web app using Java Spring Boot and Angular, saving time and costs for 10,000 active users.
- Migrated to Docker with Kubernetes orchestration, implemented CI/CD pipelines in Jenkins, reducing build time by 60% and minimizing manual effort.

Software Engineer

UnitedHealth Group - Optum Global Solutions

July 2019 – March 2022 Hyderabad, India

- Built an Automation Test Framework using REST Assured to validate a rule engine-based web app with 25,000 test case combi- nations.

EDUCATION

B.Tech. in Computer Science - 8.0 CGPA

Maharshi Dayanand University, Rohtak

June 2015 – July 2019

XII - Science & Mathematics - 90.0 %

Central Board of Secondary Education (CBSE)

April 2014 – May 2015

PROJECTS

Autopilot by Cars24

- Architected and implemented the backend infrastructure for a comprehensive driver-on-demand service Autopilot, supporting both B2C and B2B customers, enabling seamless driver bookings and management which has efficiently handled over 40,000+ trips in a month, demonstrating exceptional performance and reliability.

BharatRTO by Cars24

- Architected and implemented the serviceability and dynamic pricing engine for BharatRTO, streamlining consumer access to hassle-free RTO services. Expanded service coverage to 80% of target regions and enhanced pricing accuracy by 25%, boosting consumer adoption by 15%.

Driver Now by Cars24

- Redesigned Autopilot backend, deploying the Floater Service microservice to cut driver delays by 25% and costs by 30% by replacing vendors like Locus. Its plug-and-play architecture improved SLA adherence by 20% while supporting seamless runner allocation for pickup and drop operations.

Galaxy by Cars24

- Led the development of Galaxy, a platform enabling geolocation-based serviceability and dynamic pricing for complex services like CHALLAN, RTO services, and Autopilot driver pricing (per-minute and per-hour costs). Scaled service coverage by 30%, enabled real-time pricing adjustments with tenant-specific surges, discounts, and coupons, and supported bulk updates for 10,000+ services in seconds. Improved pricing accuracy by 40%, boosting revenue while ensuring data integrity with JSON validation for seamless deployments.

Airtel Africa Enterprise Portal

- Implemented a web portal for Airtel business partners, facilitating seamless registration and access to services. This initiative led to convenient partner registrations, streamlining their interaction with Airtel services and enhancing operational efficiency.

NFS Zambia

- Engineered a microservice using JPOS for an ISO8583 Financial Messaging System, integrating with Zambia's National Financial Switch via sockets.

Airtel Payment Controller

- Maintained and Enhanced a high-performing web service for Airtel Money, implementing State Design patterns to manage and track transactions.

Airtel Biller Platform

- Enhanced and Designed new features for web portal for onboarding biller partners onto the Airtel Platform, facilitating the seamless configuration of payment APIs.

DARE (Decision Automation Rules Engine)

- A single-page web application automating decision-making processes, enabling clients to meet compliance deadlines and yielding annual business savings of \$1.5M.

Case Assignment Tool (CAT)

- A web app for dynamically assigning clinical cases, optimizing advocate allocation. Achieved a 30% efficiency boost and 25% faster response times.

Case Management Referral Automation

- Built a Java utility automating case note creation and real time assignment for clinical staff, enhancing workflow efficiency.
